## Gold Standard

### *The Gold Side:*

In the “Gold” setting, the pedal is operating with a fairly flat response curve. There is plenty on gain on tap and there is a lot of harmonic content as the gain is increased.

In the “Shift” position, the pedal’s tonal center is shifted in the lower mids to a smokier, more compressed tone. This setting will also fill out the tone, especially when using an open-back combo amp. This setting works particularly well with brightish guitars and amps. The “Shift” setting is also a great choice for achieving the elusive “violin tone” at higher gain settings because a nice hint of fuzz is injected into the sonic mix.

The center on the tone control has been shifted for a somewhat softer attack. Neutral is now at approximately 2 O’Clock.

### *The Helium Side:*

The primary design goal of tweaking the Helium side was to achieve a natural, organic low-gain performance and to compliment the Gold side when stacked. The tonal center was shifted slightly and the overall voice was tweaked, particularly in the lower mids. This is most evident when using a neck pickup, particularly a Strat or Tele; the tones are absolutely stellar!

*On/Off Switch:* True Bypass.

*9v DC Input:* standard polarity tip negative/barrel positive barrel jack - works with regulated DC battery eliminators. This DC Input is also electrically protected from an reverse polarity connection.

(9v battery included in pedal). If you use a battery eliminator, the internal battery connection is mechanically and electrically disconnected from the circuit.

If you are only using battery power, disconnect the input jack when not in use so as not to drain the battery!

### LIMITED WARRANTY

Each pedal comes with a Limited one-year Warranty. This warranty covers all manufacturing defects and parts. Abuse and normal wear and tear is not covered. This pedal is not user serviceable and any evidence of circuit tampering or modification will void the warranty.
